

Pigeonpea, Arhar or Tur is native to India. It is the second most important pulse crop after gram and a major Kharif crop of the country. India ranks first in the area and production of Pigeonpea globally. More than 90% of production is from Maharashtra, Karnataka, Madhya Pradesh, Uttar Pradesh, Gujarat, Jharkhand, Telangana and Andhra Pradesh. The major export markets are Algeria, The United Arab Emirates (UAE), Sri Lanka, Turkey, and The United States of America (USA).

Dynamic Crop Calendar (DCC)

It is a real-time tool that tracks and forecasts stresses and their severity by commodity, variety and phenophase wise. The DCC helps to estimate crop health, yield and risk for individual fields at various temporal and geo-spatial levels. DCC also helps in customised monitoring, alert generation and advisory activities.

Yield at Risk (YaR) - Stability

The fluctuation/risk in yield or productivity varies from region to region. The region-wise variation on the yield is depicted in the graph below.

Price Volatility

The monthly fluctuations in price for different benchmark markets are shown below.

Aerial Photo

Aerial photo provides the visual representation of the field periodically.

Multispectral Yield Analysis

Tool that provides a Normalised Differential Vegetation Index (NDVI) analysis of individual fields to ground-truth indices. It is standardised across time periods for quick visual interpretation.

Ground-Truth Risk Report

Real-time estimation of yield and its threshold at various stages of crop growth, based on field monitoring of plant health and detection of stress.

Multispectral Analysis

Normalised Differential Vegetation Index (NDVI) comparison of field versus regional indices across commodity, variety and phenophase.
